AWS with AI: Zero to Hero | Complete Cloud & AI Mastery Course

🎯 What You Will Learn

- Master AWS Cloud from scratch — even with zero prior experience
- Understand core services like EC2, S3, IAM, VPC, Lambda, and more
- Build real-world data engineering pipelines using AWS services
- Design and implement scalable Data Lakes & Data Warehouses
- Work with ETL tools like AWS Glue, Athena, and Redshift
- Learn batch and real-time data processing (Kinesis, streaming)
- Gain hands-on experience with serverless architecture
- Implement CI/CD pipelines and Infrastructure as Code (CloudFormation/Terraform)

🤖 AI & Machine Learning Skills

- Understand AI, Machine Learning, and Generative AI fundamentals
- Build and deploy models using AWS SageMaker

- Work with AI services like Comprehend, Rekognition, Textract
- Learn Prompt Engineering & Generative AI concepts
- Explore Amazon Bedrock & Foundation Models
- Integrate AI into real-world cloud applications

🏗️ Architecture & Advanced Skills

- Design systems using AWS Well-Architected Framework
- Build highly scalable, secure, and fault-tolerant architectures
- Understand microservices & container-based deployments (Docker, Kubernetes)
- Implement monitoring, logging, and cost optimization strategies

---

🚀 Career & Interview Readiness

- Solve real-world case studies and hands-on projects
- Learn system design for Data & Cloud roles
- Prepare for roles like:
    - Data Engineer
    - Data Analyst
    - AI Engineer
    - Cloud Engineer
    - Data Architect
    - Solution Architect
- Get interview questions, answers, and practical scenarios
- Build a job-ready portfolio with end-to-end projects

💼 Outcome of This Course

By the end of this course, you will be able to:

- Build production-ready AWS + AI solutions
- Confidently attend and crack technical interviews
- Transition into high-paying Cloud & AI roles
